Tiro	Tibaax Taran	Teed
2	1 × 2	..
3	1 × 3	...
5	1 × 5
7	1 × 7
11	1 × 11
13	1 × 13
17	1 × 17
19	1 × 19

Waxa innooga muuqata tirooyinka kor ku qoran in teed-koodu uu ka kooban yahay hal dhinactax. Tirooyinka teed-koodu sidaas oo kale uu yahay, isirradeedu waxay yihiin kow (1) iyo tirada lafteeeda. Markaas tirada isirradeedu ay yihiin 1 iyo tirada lafteeeda, labadaas oo qudha, waxa la yiraa tiro mutuxan. Sidaas darteed, hormada :

$\{2, 3, 5, 7, 11, 13, 17, 19, 23\}$ waa tirooyin mutuxan.

Tusaale :

31 ma tahay tiro mutuxan ?

Furfuris :

Isirrada 31 waxay yihiiin 1 iyo 31 taas oo ah tirada laftee-dii iyo kow. Kol haddii isirrada 31 ay yihiiin kow iyo tirada lafteeedii markaas 31 waa tiro mutuxan.

Tirooyinka kow ka weyn isla markaas isirradoodu kow iyo laftooda ay ka badan yihiiin waxa la yiraa tiro farcan.

Hormada $\{4, 6, 8, 9, 10, 12, \dots\}$ waa tirooyin farcan

sababtoo ah isirradoodu way ka badan yihiiin 1 iyo laftooda sida : $4 \times 1 = 4$ ama $1 \times 2 \times 2 = 4$, $6 \times 1 = 6$ ama $1 \times 2 \times 3 = 6$, $8 \times 1 = 8$ ama $1 \times 2 \times 4 = 8$, $9 \times 1 = 9$ ama $1 \times 3 \times 3 = 9$ iwm.

Tusaale :

14 ma tahay tiro farcan ?

$14 \times 1 = 14$ ama $1 \times 2 \times 7 = 14$. Kol haddii isirrada 14 ay ka bateen kow iyo tirada qudhideeda markaas 14 waa tiro farcan.

Waxa kale oo aad garan karta tiro mutuxan, marka aad ka saarto tirada 2, in ay tahay tiro kisi. Waxa iyaduna jirta in tirada 1 ay tiro walba u tahay isir, weliba 1 tiro mutuxan iyo tiro farcan midna maaha.

ISIRRO MUTUXAN

Waxaynu ognahay in tiro farcan oo kastaba isirradeedu ay ka badan yihiiin 1 iyo tirada qudheeda. Metelan 24 isirrada ay leedahay waxay yihiiin :

- 1) $24 = 1 \times 24$
- 2) $24 = 2 \times 12$
- 3) $24 = 3 \times 8$
- 4) $24 = 4 \times 6$

Si kale haddii aynu u qorno waxay noqonaysaa :

1) 24	2) 24	3) 24	4) 24
1 24	2 12	3 8	4 6

Taasi waxay tahay 1 2 3 4 6 8 12 24

Tusaalah (2) labada siyood ee hoos ku yaal ayuu u kala bixi karaa :

2) 24	ama	24
2×12		2×12
$2 \times 2 \times 6$		$2 \times 3 \times 4$

Waxaad arki karta in labada siyood ee kor ku qoran, in 6da iyo 4ta ay sii kala bixi karaan sida :

24	ama	24
2×12		2×12
$2 \times 2 \times 6$		$2 \times 3 \times 4$
$2 \times 2 \times 2 \times 3$		$2 \times 3 \times 2 \times 2$

Hadda waxaynu aragnaa in isirradii 24 ay gaareen heer aanay qaybsami karin. Marka isirradu aanay dib u qaybsami karin ayaa la yiraa isirro mutuxan sababtoo ah in aan

isirna laftiisa iyo 1 mooyaane aanu wax kale u qaybsami karin. Haddii tusaalooyinka (3) iyo (4) aynu soo saarno isirradoodaa mutuxan waxay noqonayaan :

$$3) \quad 24$$

$$3 \times 8$$

$$3 \times 2 \times 4$$

$$3 \times 2 \times 2 \times 2$$

$$4) \quad 24$$

$$4 \times 6$$

$$2 \times 2 \times 2 \times 3$$

Si kastaba ha loo doono isirradada mutuxan ee 24, hubaashu waxay tahay in $24 = 2 \times 2 \times 2 \times 3$. Taasi waxay na tusaysaa in isirka mutuxan uu ku dambaynaayo tiro mutuxan. Kalahormarinta iskudhufashada awgeed qiime ma laha kalahormarinta isirradada mutuxani. Waa isku mid $2 \times 2 \times 2 \times 3$, iyo $3 \times 2 \times 2 \times 2$ iyo $2 \times 3 \times 2 \times 2$ iyo $2 \times 2 \times 3 \times 2$.

$$2 \times 2 \times 3 \times 3 \quad 3 \times 3 \times 2 \times 2$$

$$\text{ama } 36 = 2 \times 2 \times 3 \times 3$$

ISIR WEYNAHA WADAAGAAN (I.W.W.)

Tiro farcan oo waliba waxay leedahay isirro mutuxan oo u gaar ah. Markaas laba tiro oo farcan haddii aynu hay-sanno, waynu soo saari karnaa isir weynaha ay wadaagaan labada tiro. Isir weynaha ay wadaagaan laba tiro waxa weeye tirada ugu weyn ee labada tiroba ay u qaybsamaan haraa la'aan. Haddii aynu soo saarayno isir weynaha ay wadaagaan (I.W.W.) 24 iyo 36, waa in labada tiroba isirradeeda mutuxan aynu raadinnaa, sida :

$$24 = 2 \times 2 \times 2 \times 3$$

$$36 = 2 \times 2 \times 3 \times 3$$

Markaas waxaynu gooni ula baxaynaa isirrada mutuxan ee labadeena tiro ay wadaagaan. Taasoo aan ka ogaanayno in labada tiro ay $2 \times 2 \times 3 = 12$ wadaagaan. Sidaas darteed $2 \times 2 \times 3 = 12$. Waxa iska cad markaas in 12 ay tahay tirada ugu weyn ee 24 iyo 36 u wada qaybsamaan haraa la'aan. Sidaas awgeed 12 waa isir weynaha ay wadaagaan 24 iyo 36.

IV. Soosaaridda boqolley tiro marka boqolkiiga lagu siiyo :

Si loo soo saaro boqolley marka boqolkiiba iyo tirada ay ka tahay lagu siiyo waa in:

- 1) Boqolkiibada lagu siiyo aad u rogtaa jajab ama jajab tobanel.

- 2) Markaa dabadeed waa inaad soo saarfax taranka jajabka ama jajab tobantle iyo tiradii lagu siiyay.

Tusaale 1 :

Haddii 4% arday ay ka maqan yihiin arday 300 ah oo dugsi dhigata, raadi inta arday ee ka maqan dugsigaa?

Furfuris :

$$4\% = \frac{4}{100} \text{ ama } 0.04 \text{ markaad u rogtu jajab ama ja-}$$

jab tobantle. Taranka jajabka iyo tirada lagu siiyey :

$$\frac{4}{100} \times 300 = 4 \times 3 = 12 \text{ Arday}$$

ama taranka jajab tobantlaho iyo tirada lagu siiyey :

$$0.04 \times 300 = 12.00 = 12 \text{ arday}$$

∴ Tirada ardayda maqani waa 12 arday.

Tusaale 2 :

Iskaashato kaboolay ah ayaa 72 kabood sameysay. Haddii laga gatay 75% immisa kabood ayey iibiyeen?

Furfuris :

$$75\% = \frac{75}{100} \text{ jajab ahaan ama } 75\% = 0.75 \text{ jajab to-}$$

$$\frac{75}{100} \times 72 = \frac{75 \times 72}{100} = 3 \times 18 = 54 \text{ kabood}$$

∴ 54 kabood ayey iibiyeen.

V. Soosaaridda boqolkiiba marka boqolleyda iyo tirada saldhigga ahba la og yahay.

Haddii 40 su'aalood oo yeeris ah Xasan 38 uu sax keenay, boqolkiiba intuu saxay?

Si loo helo boqolkiiba 38 inta ay ka tahay 40 waa in labada tiro jajab ahaan la isu garab dhigaa ayadoo sarreeyaha laga digayo tirada boqolkiiba la doonayo. Markaasna jajab-ka loo rogaa boqolkiiba. Taas oo ah sarreeyaha ayaa loo qay-bin hooseeyaha,, dabadeedna jajab tobantaha la helo baa lagu qori astirada boqolkiiba ee u dhiganta.

Sidaas awgeed, haddii Xasan 40kiiba uu saxay 38 eray

38
wuxuu jajabkeedu noqonaya,
40 Si loo helo boqolkiibada

38

— waa in aynu isugu qaybinaa sida hoos ku taal oo kale:
40

$$\begin{array}{r}
 & \underline{0.95} \\
 38 = 40 | \begin{array}{r} 38.0 \\ - 36 \\ \hline 2.0 \\ - 2.0 \\ \hline 0 \end{array} & = 0.95 \times 100 \\
 & = 95\%
 \end{array}$$

\therefore Boqolkiiba Xasan wuxuu saxay 95.

Waxa kale oo loo shaqeeyn karaa sidan :

$38 = t\%$ intay ka tahay 40.

$$\text{Taasu waxay tahay } \frac{38}{40} = t\% \text{ oo ah } \frac{38}{40} = \frac{t}{100}.$$

$$\text{Taasu waxay la mid tahay } 0.95 = \frac{t}{100}$$

sidaas darteed, $t = 0.95 \times 100$

$$\therefore t = 95\%$$

$t =$ Boqolkiiba inta uu saxay Xasan = 95%.

- 6) Waa intee bedka saddexagal salkiisu yahay 6 sm.,
jooggiisuna yahay $7\frac{1}{2}$ sm.?

1. Raadi bedka shaxannadan (mid kasta intusa haraysan), adigoo tirinaya.
2. Kuwee isku bed ah.

Naqtiin :

Shaxannada sallaxa ah sida, saddexagal, labajibbaarane, laydi iwm. waxa ay leeyihim dherer iyo ballac keliya. Jagada ay ku sadhiyaanna waxa la yiraahdaa bed.

Bedka labajibbaarane iyo laydi waxa lagu helaa jidka.

Bed = dherer \times ballac.

Bedka saddexagal waxa lagu helaa jidka :

$$\text{Bed} = \frac{1}{2} \text{ joog} \times \text{dherer.}$$

Layli :

Soo saar bedka laydiyadan :

Dherer	Ballac
--------	--------

1) 10 sm.	5 sm.
-----------	-------

2) 14 sm.	6 sm.
-----------	-------

3) 90 sm.	80 sm.

4) 25 sm.	$7\frac{1}{2}$ sm.
-----------	--------------------

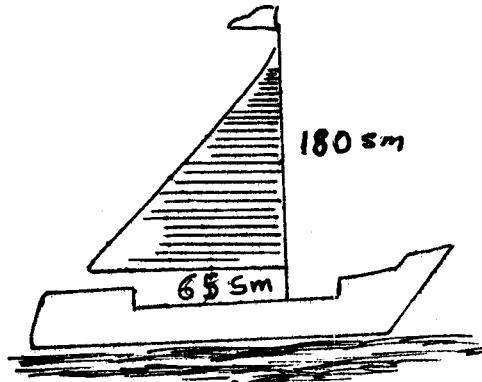

5) Beer baa dhererkeedu 120 m. yahay. Haddii balaceedu 10 m. ka weyn yahay dhererkeeda waa maxay bedka beertu?

6) Soo saar bedka labajibbaaraneha ballaciisu yahay :
1) 10 sm., 2) 12 sm., 3) 150 sm., 4) 126 sm.

7) Soo saar bedka saddexagal kasta.

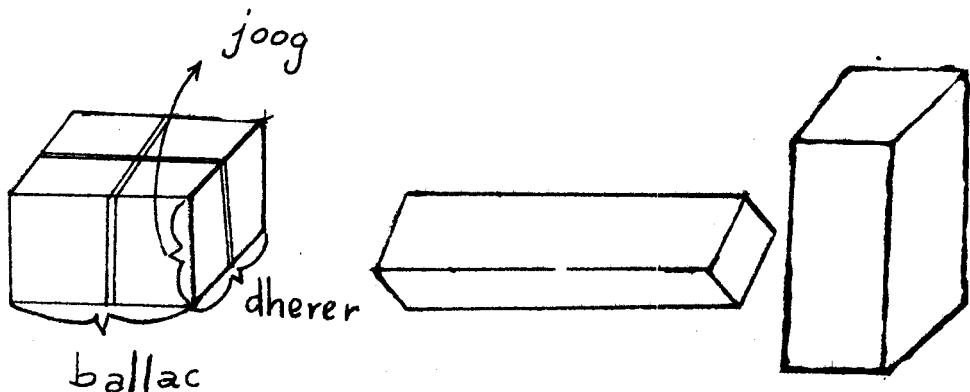

- | Dherer | ballac | dherer | ballac |

| b. 100 sm. | 46 sm. | j. 4 sm. | 50 sm. |
| t. 80 sm. | 70 sm. | x. 16 sm. | 24 sm. |

8) Doonta Axmed shiraaceedu waa qaab saddexagal. Salka shiraaca dhererkiisu waa 65 sm., jooggiisuna waa 180 sm. Iminisa sm. labajibbaaran weeye shiraacu ? (Eeg shaxanka hoose).

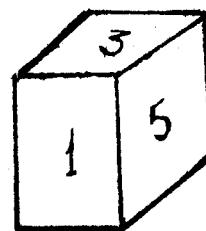

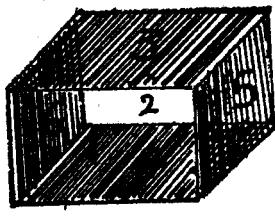

M U G

Waxa jira shaxanno badan oo leh dherer, ballac iyo joog
Fiiri kuwan :

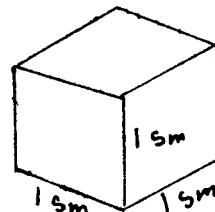

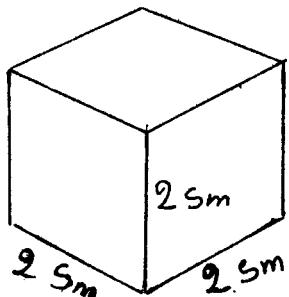

Sanduuqu wuxu leeyahay lix weji oo midkasta yahay lay-di.

Waxa muuqda saddex weji.

Sanduuqa liixa wejiba yihin labajibbaaraneyaal iswada
le'eg waxa la yiraahdaa saddex jibbaarane.

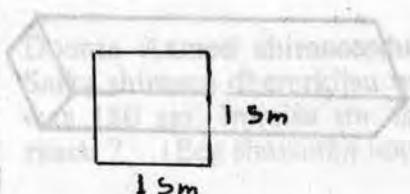

Shaxannada leh dherer, ballac iyo joog waxay cabbirkoodu leeyihiin mug.

Mugga shay waa dulalaatiga uu buuxiyo shaygaasu. Marka aan radinayno bedka dul waxa aynu isticmaalaa halbeegga ah 1 sm^2 . Haddaba mugga waxa halbeeg u ah 1 sm^3 , ama saddex jibbaarane weji kastaa yahay 1 sm .

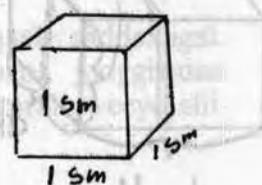

Halbeegga bedka

$$(1 \text{ sm}^2)$$

Halbeegga mugga

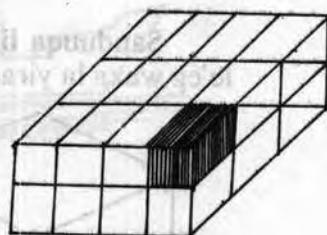

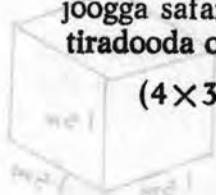

$$(1 \text{ sm}^3)$$

Tusaale 1 :

Sanduuq baa dherrekiisu yahay 3 sm ., ballaciisu yahay 4 sm ., jooggiisu yahay 2 sm . Immisa sentimiter oo saddexjibbaaran baa geli kara ?

Sida aan shaxanka baasha ku aragno, inta madoobi waa hal sm . oo saddex jibbaaran. 24 caynkaasa ayaa geli karaaya. Fiiри tirada saddexjibbaarane ee ballaca safani waa 4 , inta dhererka safani waa 3 , inta joogga safani waa 2 . Sidaa awgeed, tiradooda oo idili waa :

$$(4 \times 3 \times 2) \text{ sm}^3 = 24 \text{ sm}^3.$$

Haddaba, Mug = dherer \times ballac \times joog.

Waa maxay mugga sanduuq dhererkiiisu 12 sm. yahay, ballaciisu 10 sm. yahay, jooggiisuna 4 sm. yahay ?

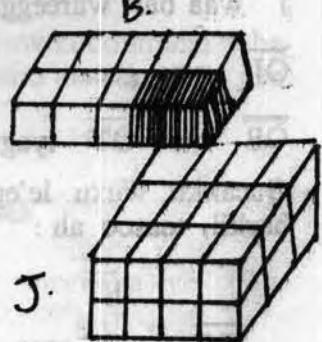

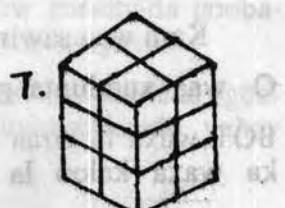

Purfuris :

$$\boxed{\text{Mug} = \text{dherer} \times \text{ballac} \times \text{joog}}$$

Sidaa awgeed, mugga sanduuqu waa $(12 \times 10 \times 4)$ sm³. ama 480 sm³.

Leyli :

- 1) Immisa sm³. ayaa ku jira shaxan B?
- 2) Immisa sm³. ayaa ku jira shaxan T?
- 3) Immisa sm³. ayaa ku jira shaxan J?

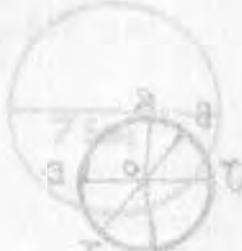

Raadi mugga sanduuqyada :

Dherer	Ballac	joog
--------	--------	------

- | | | | |
|-----|---|---------|--------|
| 4) | 15 sm. | 10 sm. | 5 sm. |
| 5) | 10 sm. | 9 sm. | 16 sm. |
| 6) | 60 sm. | 40 sm. | 20 sm. |
| 7) | 180 sm. | 100 sm. | 50 sm. |
| 8) | 4 m. | 5 m. | 3 m. |
| 8) | 15 m. | 20 m. | 8 m. |
| 10) | Waa maxay mugga saddexjibbaarane dhererkiiisu yahay 40 sm.? | | |

J.

11) Soo saar mugga saddexjibbaarane haddii dhererka dhinac kasta yahay 12 m?

12) Cawaale berked buu u qoday xoolihiiisa. Berkedda dhererkeedu waa 26 m., ballaceedu was 18 m., joogeeduna waa 16 m. Soo saar mugga berkedda.

GOOBO

Kani waa sawir goobo.

O waa xuddunta goobada.

BOT waxa la yiraa dhexroor. Dhexroorka waxa kaloo la oran karaa xariijinta BT.

J waa bar wareegga goobada ku taalla.

OJ waa gacan.

OB iyo OT iyaguna waa gacanno.

Gacanku wuxu le'eg yahay dhexroorka barkii, taasoo ah :

MEERISKA GOOBO

Qaado dun iyo mastarad oo tabbir meeriska iyo dhexroorka goobo kasta oo soo socota.

Haddii meeriska goobo kasta aad u qaybiso dhexroorkeeda, had iyo jeer waxad heli qayb le'eg ama u dhaw 3.14.

Meeris ÷ dhexroor = 3.14.

Weedha iskudhufashada ee isu qaybintaas waa :

Meeris = dhexroor × 3.14.

Jidkaas ayaa lagu helaa meeriska goobo kasta. Jidka dhexroorka lagu helaa waa :

Dhexroor = meeris ÷ 3.14.

Laylisyo :

1) Raadi meeriska goobooyinka leh dhexroorrada soo sooda :

BEDKA GOOBO

Waxqabdkii fasalka ee ku saabsanaa goobo loo ekeysii-nayo laydi waxan ka ogaanay in bedka goobo kasta lagu helo jidkan :

$$\text{Bedka goobo} = \text{gacan} \times \text{gacan} \times 3.14.$$

Layli :
